

Q1) INORDER AB RJC LID E F H G

Preorder LK A B C J I A E D F G

Postorder A B C J K I L D E F H G

Q1)

Q2) The final tree would be

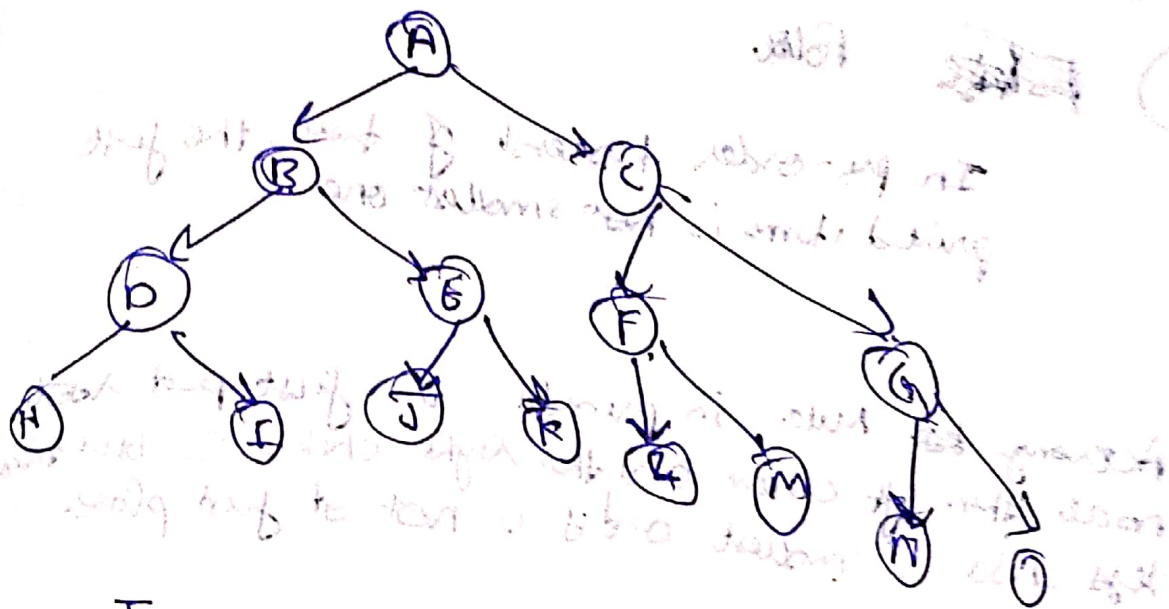

This tree is not an AVL Tree

Q3) Ht of the tree is 3

The largest number of nodes $\rightarrow 2^{n+1} - 1 = 2^4 - 1 = 15$

The smallest no of nodes $\rightarrow 2^{n-1} = 2^3 = 8$

Tree with largest number of nodes is

Internal nodes - A, B, C, D, E, F, G
 Leaf Node - H, I, J, K, L, M, N, O

The with smallest number of nodes

Here,

Internal Nodes \rightarrow A, B, C,
 Leaf Node \rightarrow D

10

~~Folder~~

Folder

In pre-order traversal of tree, the first printed item is not smallest one

According to rule, in pre-order, we first print root node then left child and then right child. In this tree, left child is smallest and it is not at first place.

Ex

preorder becomes 5 3 1 4 8 7 12

Here 3 is smallest in first cycle but not at first place.

5) The breadth first traversal of given tree is

2, 3, 5, 10, 8, 7, 2, 2, 11, 13, 20, 24, 16

Deletion and addition operation is not possible in tree because this is not binary search tree. This operations only exist for BST.

7) If the numbers 7, 5, 1, 8, 3, 6, 0, 9, 4, 2 are inserted in order the binary search tree will be

The inorder traversal of the above tree will be:

0, 1, 2, 3, 4, 5, 6, 7, 8, 9

option (3)
